

Project description interface Time&Work and AsiX at Coop. LAURIN

The fruit cooperative Laurin processes 66,000 tons of apples at its three locations, 70% of which are exported abroad.

The 160 employees are the company's great capital. So that the complex processes in personnel management from the introduction of new employees to training planning, occupational medical visits, documents to be handed over, employee appraisals, due dates and competence assessment run efficiently and without errors, these are digitized and controlled with the management software AsiX.

The tried and tested time recording software Time & Work has been used for decades to record working hours and for the automated notification of presences and vacations, which meets the complex requirements and optimally supports these processes.

OG Laurin can no longer do without both systems, Time & Work and AsiX, and therefore a decision was made to exchange data and implement an interface, which could be successfully completed within a short time and has the following advantages:

- Time saving
- Increased data reliability
- Avoiding errors
- Automated updating of the data
- Increased legal certainty

Feedback from Patrick Thaler - Head of Production & Technology at OG Laurin:

Thanks to the AsiX interface with our Time & Work - Start Web time and attendance system, all employees involved in the induction plan are automatically informed of new hires and the associated tasks are distributed.

This ensures that all steps in the induction plan are processed and that no task is forgotten.

Time & Work and AsiX can also digitize and optimize your HR processes.
